# KeyPOS

KeyPOS is a full system that caters for the whole process of importing bulks of pins from operators of prepaid services and distributing them through distributors, dealers and merchants. It is a very secure and reliable system whose drive is not only to revolutionize conventional scratch cards, but to tackle residing issues and enhance the experience of existing electronic voucher systems.

KeyPOS is also another channel for Bill Payments, Mobile Top Ups (International & Domestic) and other added value services. The POS is an alternative solution for places where we can't install KIOSK because of space or infrastructure. We developed the POS software to be user friendly. For sure there is a printed receipt generated from the POS at the end of the transaction. POS will enable our partners to accelerate the services they are already offering, expand their customer base, enhance the brand image and control and monitor all the transactions through a fully managed web portal. KeyPOS provides services like KeyPay which allows users to pay Utility Bills, and KeyTopUp which allows users to top-up their phones domestically and send credit to their families and friends internationally.

Key top-up is a service that enables the users to topUp their domestic mobile starting from AED 5, or to recharge to their Families and friends back home.

KeyPay is a service provided on KeyKiosk with the following services:
